

FIT-BUDDY AI – PROJECT DESIGN PHASE

1. System Architecture Design

- Design the overall structure of Fit-Buddy AI.
- Connect the frontend, backend, database, and Gemini AI.

2. User Interface Design

- Login/Register page
- User profile page
- Fitness goal selection
- AI fitness plan page
- AI chatbot page
- Progress tracking dashboard

3. Database Design

- User details
- Fitness goals
- Workout plans
- Workout history
- User feedback
- Progress records

4. AI Module Design

- Send user requirements to Gemini.
- Generate personalized fitness plans.
- Modify plans based on user feedback.
- Provide fitness-related responses.

5. Workout Module Design

- Daily workout schedule
- Exercise details
- Duration and repetitions
- Workout completion status

6. Progress Module Design

- Track completed workouts.
- Maintain workout history.
- Display progress through charts or summaries.

7. Security Design

- User authentication.
- Secure storage of user information.
- Protect Gemini API credentials.

8. System Flow Design

User → Login → Profile → Fitness Goals → Gemini AI → Personalized Plan → Workout → Feedback → Updated Plan → Progress Tracking
