

FIT-BUDDY AI – PROJECT TESTING PHASE

1. Unit Testing

- Test each module separately.
- Check login, profile, workout, chatbot, and progress modules.

2. Integration Testing

- Check the connection between frontend, backend, database, and Gemini AI.

3. AI Testing

- Test whether Gemini generates suitable workout plans from different user inputs.
- Check AI responses for accuracy and safety.

4. Functional Testing

- Verify that all required features work correctly.
- Test workout tracking, plan modification, chatbot, and reminders.

5. Usability Testing

- Check whether the application is simple and easy to use.

6. Security Testing

- Check login authentication and protection of user data.
- Ensure API credentials are secure.

7. Performance Testing

- Check response time and system performance.

8. Bug Fixing

- Identify errors during testing.
- Fix the errors and test the system again.
