

FIT-BUDDY AI – PROJECT DOCUMENTATION PHASE

1. Project Introduction

- Write the overview and purpose of Fit-Buddy AI.
- Explain the problem the project aims to solve.

2. Requirements Documentation

- Document functional and non-functional requirements.
- List hardware and software requirements.

3. System Design Documentation

- Explain the system architecture.
- Include flowcharts, system diagrams, database design, and UI designs.

4. Technology Documentation

- Document the technologies used.
- Explain the role of Gemini AI, frontend, backend, and database.

5. Development Documentation

- Describe the development process.
- Explain each module and its implementation.

6. Testing Documentation

- Document testing methods and test cases.
- Record identified bugs and their solutions.
- Include final testing results.

7. User Manual

- Explain how to register and use the application.
- Explain how to generate and modify fitness plans.
- Explain workout and progress tracking.

8. Results Documentation

- Present the final system output.
- Include screenshots of the application.
- Describe the achieved results.

9. Conclusion

- Summarize the completed project.
- Explain how Fit-Buddy AI meets the identified requirements.

10. Future Enhancements

- Voice-based AI interaction.
- Wearable device integration.
- More personalized fitness tracking.
- Additional AI-powered features.
